This event is intended to be a presentation and starting point for Anna Pineda's research project Differential Object Marking in Catalan and language contact, which has been recently funded by the Humboldt Foundation and which is being developed at the University of Cologne in close collaboration with **Marco García García** and **Klaus von Heusinger**.

Although the project is focused on Catalan (and its contact with Spanish), the present event will also gather scholars with an expertise on DOM in other Romance languages, such as Occitan or Italian dialects, as well as on Basque, another language which is in contact with Spanish and shows some instances of DOM.

Researchers interested in the phenomenon of DOM and the role of language contact in Romance are very welcome to attend the event. We hope it will be a platform to share knowledge and a starting point to establish collaborations.

REGISTRATION: Please scan the QR code if you want to attend the event, so that we can send you the link for the meeting and any other relevant communication.
